

A total of 43 UPNVJ FK Young Doctors Take the Oath of the 63rd Batch

Wednesday, 21 October 2020 16:07 WIB

HumasUPNVJ - In the midst of the Covid-19 pandemic, the Senate Open Session of the Faculty of Medicine, the inauguration and oath-taking of the 63rd batch of 2020 doctors, was held online on Wednesday (21/10/20).

In his report, dr. Tri Faranita, M.Ked (Ped), SpA as Head of the Doctor Profession Study Program said that by holding the 63rd Doctor's Hospital, the number of young doctors who have been declared graduates has increased.

"There are 43 new doctors who will be sworn in this time who have passed the UKMPPD in August 2020. Thus the number of doctors who have been sworn in by FK UPN Veteran Jakarta to date is 2,707 people. We hope that the medical graduates this time can contribute positively to health development in Indonesia." said dr. Tri Faranita.

In his remarks, Acting Dean of the Faculty of Medicine, dr. Niniek Hardini., Sp.PA, congratulated young doctors on the success of completing Academic Education in the Medical Profession Study Program at the UPNVJ Faculty of Medicine.

"This is the first step for you to experience the medical profession in Indonesia"

dr. Niniek also expressed her pride at the highest GPA of 3.75 by dr. Gina Teresa Sitepu and Doctor Professional GPA average 3.55.

"This proud result is the result of the hard work of students, parents, UPNVJ FK teaching staff and supervising doctors at UPNVJ FK partner teaching hospitals," he said proudly.

In this case, UPN Veterans Jakarta Chancellor Erna Hernawati also said that the medical profession, which is the dream of many parents, can be put to good use by providing the best service for the nation's health.

Erna also said that like other professions, with the era of the industrial revolution 4.0, all were faced with the digital era, where with technological developments the roles of doctors could one day be replaced.

"The simple thing is that now there is the Doktor.com facility, for example. It is very interesting if we imagine how advanced technology can be achieved in the next few years. If so far we have received conventional treatment, with the development of technology we can achieve what humanity has never imagined before," Erna explained.

Facing it all, how should all professions strive to exist. For this reason, serious efforts are needed to prepare oneself to excel in competition, the key is to have the skills needed by the industry today, including creative, innovative, service orientation. Completion of formal education is not stopping to learn, but lifelong learning.

Erna is sure that with the provisions and potential that graduates have, they can face the challenges that exist today. He also hopes that the graduates will continue to uphold the good name of the alma mater and implement the values of Defending the Country in the professions they will later undertake.

"My hope is to entrust the name of UPNVJ's alma mater, make UPNVJ proud, help UPNVJ become a university whose graduates are recognized by the community. Be a professional doctor, have integrity, uphold professional ethics. Not subject to any urge to break the rules, propriety under any circumstances. He can become a doctor who is known by patients as a doctor who is not material-oriented but service-oriented, a doctor who has empathy and becomes a doctor who shows the identity of defending the country and loving the country," he hoped.
